

COLOR

Color should always be noted under the same illumination.

A variety of guides for color terminology are available. In my study of lobate Lecanora species, I have used the U.S. National Bureau of Standards, InterSociety Color Council (ISCC) Dictionary of Color Names (Kelly & Judd 1976) based on a chart of centroid colors (Kelly 1965). In the descriptions of species, the colors are named and their ISCC numbers are given in parentheses.
