

Athelia Pers.

(BASIDIOMYCOTINA)

After Poelt & Vezda, 1981, and Jlich, 1978

Hymenium produces from the host an easily wiped, whitish film, with a loose subiculum, without cystidia. Spores hyaline. Lichenized, of parasitic on algae, lichens and mosses. Photobiont, if present in basidiocarp, green (Coccomyxa); vegetative mycelium not lichenized.

A. epiphylla

A. poeltii

Literature: Poelt & Vezda. 1981. Erg. II. Need to see Jlich (1978).
